

# Sources

Below is the source list of the published works that were used to obtain data and the people and organisations that provided information to Floradata. Not all of these sources are contactable, but many are. Before you do contact a source, spare a thought for how busy they may be. Floradata exposes our sources to a potentially large audience of people wanting to know how to use native seed and propagate plants. Many sources thought it important that Floradata readers would be able to contact them about their data. However, all were concerned at just how many people might do this. Please, contact them as a last resort, not as a first port of call for further information.
